香港观鸟会中国自然保育基金

简介:

香港观鸟会成立了「香港观鸟会中国自然保育基金」,以鼓 励中国大陆学者从事鸟类基础、保育研究及推广观鸟活动项 В.

资助限额:

港币10,000元正,項目开支可全部或部份得到资助 申请方法:

申请人 / 申办机构必须连同计划建议书电邮至 hkbws@hkbws.org.hk、info@chinabirdnet.org 及 chinabirdnet@gmail.com 三个邮箱或邮寄交至: 香港九龙尖沙咀漆咸道87-105号百利商业大厦1612室 香港观鸟会项目办公室 香港观鸟会中国自然保育基金委员 会收

截止申请日期:2008年1月31日

申请结果:

香港观鸟会中国自然保育基金委员会于收到申请的两个月内 进行审核,成功申请者将获得个别通知。未获接纳的项目恕 不另行通知。所有成功申请的项目必需于项目结束后两个月 内提交总结报告。

计划建议书的内容

请提供以下资料:

- 1. 计划的名称
- 2. 计划的性质、目的、对自然保育的重要性
- 3. 计划的详情、进行方法、工作计划 / 时间表
- 4. 申请人 / 申办机构的名称
- 主要研究员的资料(屋历和其进行类似计划的纪录)
- 6. 其它合办 / 协办机构
- 財政預算
- 8. 其它资助来源(包括已获批准和申请中的)
- 9. 以往申请纪录
- 10. 其它与申请有关的资料

中国观鸟年报 2006

总结

"中国观鸟年报"问世四年以来,在更新中国鸟类分布和区系的信息上越来越发挥着它重要而不可替代的作用。每年年底出版的年报是中国观鸟者一年观测成果的总结,并日渐成为国外观鸟者了解最新鸟类分布信息的平台。日益增长的中国观鸟者人数也带来了越来越多、水平也越来越高的鸟类记录和珍稀鸟种报告,这些报告和记录真实反映了中国观鸟活动的快速普及和水平的提高。同时,对于"中国观鸟年报"的编辑们来说,工作量和工作难度也相应地提高。但是在全体编辑近一年的努力下,《中国观鸟年报 2006》终于得以如约面世。

《中国观鸟年报 2006》共收录了来自全国 22 个省、5 个自治区、4 个直辖市、1 个特别行政区的记录、是继《中国观鸟年报 2005》,再次实现了每个省级行政区都有观鸟记录被收录(不含香港、台湾地区)。在鸟种方面,2006 年年报共收录中国境内的鸟类 17 目 70 科 1078 种,占中国鸟类总数的 80%(郑光美,2005)。相比 2005 年增加了 55 种。其中有两个中国鸟类家族的新成员和一大批省级鸟类的新记录同时,年报里包含国际受胁鸟种"极危 (CR)"级 3 种,"颜危 (EN)"级 11 种,"易危 (VU)"级 44 种,国家一级保护动物 27 种。这些受胁鸟种的分布、数量资料也为世界受胁鸟类濒危等级的评定、国际重要鸟区的认证等国际性保护工作的开展提供了大量新鲜的证据。

中国鸟种新记录

2006年,有两个鸟种列入中国鸟类新记录,分别是:

欧金德 European Golden Plover Pluvialis apricaria

河北: 9月28日,昌黎大埔河,1只,中国第一笔记录 [Paul Holt],给与新编号 "0388.a #"

钳嘴鹳 Asian Openbill Anastomus oscitans

云南: 10月3日,大理洱海西湖,1只亚成体,中国第一笔记录 [王亦天];给与新编号"0567.a#"

分类学上的修订

根据一些最新研究论文和著作,有一些鸟类的分类地位发生变化,对于新分出来的种类,《中国观鸟年报 2006》对它们的学名,中、英文名有如下建议:

0076# 加拿大雁 Cackling Goose Branta hutchinsii

根据 Paxinos *et al.*(2002)的研究建议,原加拿大雁 Canada Goose *B. canadensis* 体型较较小的部分亚种,被提升为种 *B. hutchinsii*。由于中国江西鄱阳湖报道的"加拿大雁"并不知道是何亚种,但是根据地理分布,和邻国日本、韩国的以往记录,最有可能是 *B. hutchinsii*。因此出现在中国的暂时定为 *B. hutchinsii*,英文名改为 Cackling Goose,中文名保留。

该种本年度无记录。

0096.1# 绿翅鸭 Common Teal Anas crecca 0096.2# 美洲绿翅鸭 Green-winged Teal Anas carolinensis 根据 Sangester *et al.*(2002) 的建议,将绿翅鸭 Common Teal A.crecca 分成绿翅鸭 Common Teal A.crecca 和美洲绿翅鸭 Green-winged Teal A.crarolinensis。后者在香港有两笔记录 (Carey et al. 2001),在中国大陆记录于河北 (Paul Holt verbally 2005),编号作相应调整,本年度只有绿翅鸭有记录。

0154.1 # 黑眉拟啄木鸟 Chinese Barbet Megalaima faber

0154.2 # 台湾拟啄木鸟 Taiwan Barbet Megalaima nuchalis

依 Feinstein *et al.*(2007) 的建议,将 *M.faber* 分为两种,*faber/sini* 亚种并为黑眉拟啄木鸟 Chinese Barbet *M.faber*, 亚种 *nuchalis* 升为台湾拟啄木鸟 **Taiwan Barbet** *Megalaima nuchalis*, 为单型种。編号作相应调整。其中,前者在 2006 年报中有记录。

0225# 草鸮 Eastern Grass Owl Tyto longimembris

依 Konig *et al.*(1999) 的建议分为亚洲和澳洲分布的 *T. longimembris* 和非洲分布的 *T. capesnsis*,前者在中国有记录、英文名改为 Eastern Grass Owl、中文名不变。

0700.1# 虎斑地鸫 Scaly Thrush Zoothera dauma 0700.2# 怀氏虎鸫 White's Thrush Zoother aurea

依 Rasmussen & Anderton(2005)的建议,中国分布的这个"种组"分为虎斑地鸫 Scaly Thrush *Z.dauma* 和怀氏虎鸫 White's Thrush *Z.aurea* 两种,前者繁殖于喜山至云南和四川,后者繁殖于远东地区,迁徙是经过中国东部,并在华南沿海越冬。中文名、英文名、编号作相应调整。两者在 2006 年报均中有记录。

0716.1# 赤颈鸫 Red-throated Thrush *Turdus ruficollis* 0716.2# 黑颈鸫 Black-throated Thrush *Turdus atrogularis*

依 Arkhipov *et al.* (2003) 及 Rasmussen & Anderton(2005) 的建议,将 *T.ruficollis* 分为赤颈鹎 Red-throated Thrush *T.ruficollis* 和黑颈鹎 Black-throated Thrush *Turdus atrogularis*。编号作相应调整,两者在 2006 年报中有记录。

0717.1# 红尾鸫 Naumann' s Thrush *Turdus naumanni* 0717.2# 斑鸫 Dusky Thrush *Turdus eunomus*

依 del Hoyo *et al.* (2005) 的建议,将 *T.naumanni* 分为红尾鹟 Naumann's Thrush *T.naumanni* 和斑鹟 Dusky Thrush *T.eunomus*。编号作相应调整。两者在 2006 年报中有记录。

0878.1# 崖沙燕 Sand Martin *Riparia riparia* 0878.2# 淡色崖沙燕 Pale Martin *Riparia diluta*

依 Loskot & Dickinson (2001) 的建议,将 *R.riparia* 分为崖沙燕 Sand Martin *R.riparia* 和淡色崖沙燕 Pale Martin *R.diluta*。编号作相应调整。两者在 2006 年报中有记录。

0936.1# 黄腹树莺 Yellowish-bellied Bush Warbler *Cettia acanthizoides* 0936.2# 休氏树莺 Hume's Bush Warbler *Cettia brunnescens*

依 Alström *et al.*(2007) 的建议,将 *C. acanthizoide* 的亚种 *acanthizoides* 及 *concolor* 提升 为黄腹树莺 Yellowish-bellied Bush Warbler *C. acanthizoides*; 亚种 *brunnescens* 提升为种,休氏树莺 Hume's Bush Warbler *C. brunnescens*, 本种为单型种。编号作相应调整。两者均在中国分布,其中前者在 2006 年报中有记录。

0966# 草绿篱莺 Eastern Olivaceous Warbler Hippolais pallida

依 Svensson.(2001) 的建议分为亚洲分布的 *H. pallida* 和非洲分布的 *H. opaca*, 前者在中国有记录、英文名改为 Eastern Olivaceous Warbler、中文名不变。

1003# 灰头柳莺 Grey-hooded Warbler Phylloscopus xanthoschistos

根据 Olsson *et al.*(2004) 和 Päckert et al.(2004) 的研究,本种与云南白斑尾柳莺 *P. davisoni* 的遗传距离比其他鹟莺属 *Seicercus* 种类为近,因此本种归人柳莺属,英文名不变,中文名改为灰头柳莺。

1023.1# 靛冠噪鹛 Courtois' s Laughingthrush Garrulax courtoisi

根据 Collar(2006) 的建议,将黄喉噪鹛 Yellow-throated Laughingthrush *Garrulax galbanus* 的 亚种 *courtoisi* 独立为种 *G.courtoisi*,但是"年报 2005" 中并没有给出中文名称。依何芬奇和杨岚(2006) 的意见,本种中文名哲为"静冠噪鹛"。

感谢陈亮、陈志鸿、董路、杜科、雷进宇、刘阳、田竹、王吉衣、王青育、闻丞、张高峰、章麟、张宇参与"分类总览"编写及初步翻译工作。贾知行、John Allcock、利伟文、吴敏、Paul Holt、利雅得、Richard Lewthwaite 进行鸟种部分的校对工作,董路、李建强、刘阳、雷进宇、王宁、肖华、周春发、邹帅进行中文部分的校对工作,雷进宇、刘阳在编辑过程中的联络和协调作了很多工作。感谢 Richard Lewthwaite、Paul Holt 一如既往地修改年报的英文部分并对疑难记录提出宝贵意见,王吉衣、朱英负责了年报图片的遴选和编辑工作。

最后,中国观鸟年报编辑一如既往地希望更多的中外观鸟者提交观鸟报告,具体办法见本报告最后的说明。本年度有以下团体或个人的记录被录,在此表示感谢:

China Bird Report 2006

Summary

In line with previous reports dating back to the inaugural *China Bird Report 2003*, the present report provides information on the distribution of birds in China in the form of bird records for the year in question (in this case 2006) and acts as a platform for the exchange of relevant information. The *China Bird Report* editorial team welcomes the increasing number of records of both common and rare birds received this year and recognizes that these reflect the activities of a growing band of competent observers and the rising popularity of birdwatching in China.

China Bird Report 2006 incorporates bird records from 22 Provinces, five Autonomous Cities, four municipalities and one Special Administrative Region (but does not include records from Hong Kong or Taiwan), rendering it structurally comparable to the reports of the previous two years which also categorized bird records at provincial level. This year's report provides records of 1078 species (55 more than in the previous report), from 17 orders and 70 families, representing 80% of all bird species in China as listed by Zheng (2005), including two species new to China and dozens of species with first records at provincial level. Records of species of conservation concern are highlighted in view of the importance of such data to inform international efforts aimed at protecting bird species, for instance in assessing species conservation status and identifying important bird areas. This report publishes records of three "Critically Endangered", 11 "Endangered" and 44 "Vulnerable" species, as categorised by BirdLife International (2004), and also 27 species listed in China under "National Protection Class I".

New Records for China

In 2006, two species were recorded in China for the first time. These (with new species numbers) are:

0388.a # European Golden Plover Pluvialis apricaria

Hebei: One at Dapuhe, Changli on 28 September [Paul Holt], the first record for China.

0567.a# Asian Openbill Anastomus oscitans

Yunnan: A juvenile at Xihu, Erhai (Dali) on 3 October [Wang Yitian], the first record for China.

Taxonomic Changes

The following taxonomic changes have been adopted by the *China Bird Report* editorial group.

0076# 加拿大雁 Cackling Goose Branta butchinsii

It was agreed to follow Paxinos et al. (2002) who treated B. hutchinsii as specifically distinct from Canada Goose B. canadensis. Under this treatment, the new B. hutchinsii comprises four subspecies, all of which are smaller forms. Recognising that the first record of "Canada Goose" (from Poyang Lake, Jiangx) had not been assigned to subspecies (e.g. in Zheng 2005) and that records of apparently wild individuals of "Canada Goose" had been assigned to B. hutchinsii in Korea and Japan, the editorial group decided that a similar treatment was appropriate for Chinese records. Hence, whilst the Chinese name is retained, the English and scientific names are changed, as shown above. No records of the species were accepted this year.

0096.1# 绿翅鸭 Common Teal Anas crecca

0096.2# 美洲绿翅鸭 Green-winged Teal Anas carolinensis

We follow the taxonomic treatment by Sangster *et al.* (2002) in recognizing Common Teal *A. crecca* and Green-winged Teal *A. carolinensis* as separate species. There are two records of Green-winged Teal from Hong Kong (Carey *et al.* 2001) and one from Hebei mainland China (Paul Holt verbally 2005). The new species numbers are shown above.

0154.1 # 黑眉拟啄木鸟 Chinese Barbet Megalaima faber

0154.2 # 台湾拟啄木鸟 Taiwan Barbet Megalaima nuchalis

Following Feinstein et al. (2007), we treat M. faber and M. nuchalis as two separate species, both distinct from Black-browed Barbet M. oorti. M. faber is polytypic comprising the subspecies faber (Hainan) and sini, (southeast China), whilst nuchalis (Taiwan) is monotypic. With regard to English names, we consider Chinese Barbet appropriate for M. faber and Taiwan Barbet for M. nuchalis. The new species numbers are shown above.

0225# 草鸮 Eastern Grass Owl Tyto longimembris

We follow Konig et al. (1999) in recognizing T. longimembris of Asia (including China) and Australasia as specifically distinct from its African counterpart T. capesnsis. The English name of T. longimembris becomes Eastern Grass Owl whilst its Chinese name remains unchanged.

0700.1# 虎斑地鸫 Scaly Thrush Zoothera dauma 0700.2# 怀氏虎鸫 White's Thrush Zoothera aurea

We have adopted the treatment by Rasmussen and Anderton (2005) who recognize as separate species *Z. dauma*, whose breeding range includes the Himalayas west to Sichuan and Yunnan, and *Z. aurea*, which breeds in the far northeast and migrates through eastern China to winter primarily in southern coastal provinces. Records of both species are given in this year's report. The new Chinese names, English names and species numbers are shown above.

0716.1# 赤颈鸫 Red-throated Thrush *Turdus ruficollis* 0716.2# 黑颈鸫 Black-throated Thrush *Turdus atrogularis*

With regard to the former "Dark-throated Thrush" *T. atrogularis* complex, we follow Arkhipov *et al.* (2003) and Rasmussen and Anderton (2005) in treating *T. ruficollis* and *T. atrogularis* as separate species. Records of both species are given in this year's report. The new Chinese names, English names and species numbers are shown above.

0717.1# 红尾鸫 Naumann' s Thrush Turdus naumanni

0717.2# 斑鸫 Dusky Thrush Turdus eunomus

We follow Feinstein *et al.* (2007) in regarding *T. naumanni* and *T. eunomus* as separate species, both of which were previously lumped under *T. naumanni*. This year's report contains records of both species listed separately. The new Chinese names, English names and species numbers are shown above.

0878.1# 崖沙燕 Sand Martin Riparia riparia

0878.2# 淡色崖沙燕 Pale Martin Riparia diluta

We follow Loskot & Dickinson (2001) in regarding *R. diluta* as specifically distinct from *R. riparia*. The two were for many years lumped under *R. riparia*. Records of both species are given in this year's report. The new Chinese names, English names and species numbers are shown above.

0936.1# 黄腹树莺 Yellowish-bellied Bush Warbler Cettia acanthizoides 0936.2# 休氏黄腹树莺 Hume's Bush Warbler Cettia brunnescens

Based on vocalization and mtDNA divergence, Alström et al. (2007) recommended splitting C. acanthizoide into two sympatric species: C. acanthizoides (with subspecies acanthizoides and concolor) and the monotypic C. brunnescens. Both species under this new treatment occur in China, and there are records of C. acanthizoides in the present report. The Chinese names, English names and species numbers to be used in this report are shown above.

0966# 草绿篱莺 Eastern Olivaceous Warbler Hippolais pallida

Following the treatment by Svensson. (2001), H. pallida is considered a separate species from H. opaca. The English name of H. pallida becomes Eastern Olivaceous Warbler, whilst the Chinese name is retained.

1003# 灰头柳莺 Grev-hooded Warbler Phylloscopus xanthoschistos

According to DNA studies by Olsson et al. (2004) and Päckert et al. (2004), this species is better considered to belong to the genus Phylloscopus rather than to Seicercus, where it has for a long time been placed. We follow the recommendation to reassign the taxon to Phylloscopus. The Chinese name is altered accordingly, while the English name is retained

1023.1# 靛冠噪鹛 Courtois' s Laughingthrush Garrulax courtoisi

In China Bird Report 2005 we announced that we would follow Collar's (2006) taxonomic recommendation to treat G. courtoisi as specifically distinct from G. galbanus and that we would adopt Courtois' s Laughingthrush as its English name. In this report we follow the suggestion by He and Yang (2006) with regard to its Chinese name.

Acknowledgements

The production of China Bird Report 2006 has entailed a great deal of work over a six month period. The principal coordinators were Lei Jinyu and Liu Yang. Thanks are due to Chen Liang, Chen Zhihong, Dong Lu, Du Ke, Lei Jinyu, Liu Yang, Tian Zhu, Wang Jiyi, Wang Qingyu, Wen Cheng, Zhang Gaofeng, Zhang Lin and Zhang Yu for editorial work and the preliminary English translation of "Systematic List" and to John Allcock, Geoff Carey, Paul Holt, Mike Kilburn, Mike Leven, Paul Leader and Richard Lewthwaite for commenting extensively on the text and completing the English proofing. Special thanks go to Richard Lewthwaite and Paul Holt for supporting the editorial process and to Wang Jiyi and Zhu Ying for coordinating the photographic work.

The editorial team is very grateful to the individuals and groups listed below who submitted records for this year's report. We encourage them and other birders to send us more bird records and trip reports. Guidelines for the submission of records can be found at the end of the "Systematic List".

报告

2006年中国大陆鸻鹬类足旗野外观测报告

白清泉 1 , 袁晓 2 , 章克家 2 , 刘阳 3 , 蔡志扬 4 1. 辽宁丹东观鸟会 (筹); 2. 上海野鸟会; 3.北京观鸟会; 4.复旦大学生物多样性研究所

简介

近年来,随着中国大陆观鸟活动的发展,目击、拍摄到环志鸟(包括足旗、彩环、颈环、翅标、金属环等)的数量也逐年增加,其中以佩带彩色足旗鸻鹬类的观测记录居多。为不使这些记录信息遗漏、散失,并确保将发现的信息上报到全国鸟类环志中心,2006年开始,我们在观鸟者间收集足旗观测信息。这是第一次在大陆观鸟者中间开展环志信息的回收工作,并迅速得到了各地观鸟会和广大鸟友的广泛支持,收到的观测记录数量持续上升。从2006年下半年开始,由专门的观鸟者负责,利用世界自然基金会(WWF)中国网站"观鸟版"收集环志鸟信息,每半年将结果报告全国鸟类环志中心,并在《中国观鸟年报》中以报告的形式汇点当年中国大陆鸻鹬类足旗的野外观测记录。

方法

每个开展环志地区有独特的足旗搭配或彩环组合方式,野外观察就是通过不同颜色的足旗或组合来判断目标鸟环志的地区的。因此,我们收集到的鸻鹬类足旗观测信息,以观鸟者目击或者照片为依据。包括记录时间、地点、种类、足旗组合及佩戴部位、年龄、性别、换羽情况等信息。需要说明的是,本地旗标本地目击没有统计在内(编码足旗除外),比如深圳后海湾观测到的香港足旗组合(上白下黄)、上海观测到的崇明足旗组合(黑白)、丹东发现的鸭绿江足旗组合(上绿下橙)都未统计在内。足旗及彩环提交方法见附录II

结果

2006年,我们共收集到20种136笔鸻鹬类涉禽的足旗及彩环记录,这些被彩色标记的鸟分别环志于7个国家和地区(括号内数字为记录到该地的足旗配搭数),包括澳大利亚(4)、新西兰(2)、俄罗斯(2)、美国(1)、日本(2)、中国大陆(1)和台湾地区(1)。

种类上,以斑尾塍鹬 (Limosa lapponica) (54笔记录)、弯嘴滨鹬 (Calidris ferruginea) (16笔记录)、大滨鹬 (Calidris tenuirostris) (13笔记录)、红腹滨鹬 (Calidris canutus) (12笔记录) 的记录数量占前四位,分别占总数的39.71%、11.76%、9.56%和8.82%。数量最多的足旗或足旗组合是黄色(澳大利亚西北)、橙色(澳大利亚维多利亚)、白色(新西兰北岛)和黑白组合(中国崇明岛),分别为46笔、41笔、17笔和15笔,这4种足旗搭配观测数量之和占总数的87.5%。按照环志地统计,共观测到来自6个环志地区的斑尾塍鹬,在所有鸟种中记录的环志地区最多。

从所属国家或地区来看, 澳大利亚的记录最多, 4种足旗搭配总计有14种95笔记录, 占总数的69.85%, 记录最多的鸟种是斑尾塍鹬(34笔记录)和弯嘴滨鹬(16笔记录), 其次是新西兰, 鸟种主要为斑尾塍鹬(12笔记录)。大陆崇明岛的记录排第三, 值得一提的是, 2006年4月开始, 上海崇明东滩的足旗搭配组合从"上白下黑"改为"上黑下白"后, 北迁时即已记录到4笔, 全年观测到9笔当年环志的上黑下白记录。

野外观测到足旗的地点共有17个,分布在辽宁、河北、天津、山东、上海、福建、广东等省。目击记录最多的地点是辽宁丹东,共有51笔记录,鸟种主要是选尾塍鹬(48笔记录)。其次是河北唐海和福建南安市石井镇。唐海的记录以红腹滨鹬和弯嘴滨鹬为主,这两个鸟种的记录也主要是在唐海发现的。福建省南安市石井镇是记录种类最多的地区,共有6种15笔足旗记录,其中包括1只环志于俄罗斯楚科奇地区的受胁物种勺嘴鹬(Calidris pyemeus),今后需要继续关注。从各省(市)的情况来看,观测种类最多的省份是福

建(有4个观测地点), 共观测到10种24笔记录。红颈滨鹬*Calidris ruficollis*)在3个省的6个地区有发现, 是发现地区最多的鸟种, 其次是斑尾塍鹬, 在4个地区有发现。

从月份上看,以北迁时的4、5月观测记录最多最丰富。5月有10种52笔记录,鸟种主要是红腹滨鹬,有10笔记录,其次为红颈滨鹬和弯嘴滨鹬,各有9笔记录。4月有9种48笔记录,主要是斑尾塍鹬,有29笔记录。8月份共12个记录排在第三位,是南迁时记录最多的月份,但较北迁过境的记录显著少。斑尾塍鹬在5个月份里有发现记录,是观测时间跨度最长的鸟种。春季最早的1笔记录是3月20日在丹东观测到的澳大利亚维多利亚(橙色足旗)环志的大杓鹬(Numenius madagascariensis)。

北迁时的记录无论种类、数量、环志地区、观测地区等都比南迁记录为多。北迁时有15种101笔记录,南迁有10种35笔记录;北迁记录分属于10个环志区,南迁记录分属8个地区;北迁时观测到足旗的地点共有14个,南迁时有8个。北迁记录的原环志地主要来自澳大利亚维多利亚(36笔记录)、澳大利亚西北(30笔记录)、新西兰北岛(17笔记录),南迁记录的原环志地主要来自澳大利亚西北(16笔记录)、崇明(9笔记录)和澳大利亚维多利亚(5笔记录)。北迁记录的鸟种主要是斑尾塍鹬(37笔记录)、弯嘴滨鹬(16笔记录)、大滨鹬(13笔记录)和红腹滨鹬(12笔记录),南迁记录主要是斑尾塍鹬(17笔记录)和黑腹滨鹬(Calidris alpina)(4笔记录),其余鸟种都不超过两笔记录。其中,弯嘴滨鹬、大滨鹬、红腹滨鹬等3个鸟种总计41笔记录都是北迁时野外目击的,南迁时无上述鸟种记录。

此外,除了传统的足旗外,还记录到8只编码足旗(西北澳6只,崇明2只)和6只新西兰北岛的足旗-彩环搭配(colour-banded bird)鸟的记录,这14只涉禽可以通过识别出的足旗编码或观测到的足旗-彩环搭配分辨出个体,鸟种主要是斑尾塍鹬,有11只,另有来自台湾嘉义的1笔黑翅长脚鹬(Himantopus himantopus)彩环记录。其他重要信息包括,深圳发现的两笔佩带黄色足旗(澳大利亚西北)的泽鹬(Tringa stagnatilis)记录被认为是该地环志的泽鹬在海外首次发现。本报告中的记录来自全国32位鸟友、具体的观测记录见附录I。

附录II

鸟类的标记 (环志、旗标、彩环等) 是研究鸟类迁徙的重要手段。环志回收、野外目击等信息具有重要的科学价值,所以观鸟者、摄影者对标记鸟目击的及时报告是非常重要的。中国观鸟者对标记鸟的观测记录收集已成为了一个有意识的行为,相信若干年后,随着大陆观鸟者的增多和广泛参与,有目的地在观鸟活动中观察和收集标记鸟的情况会成为观鸟者一种固定的和有意义的内容,这对中国乃至整个东亚——澳大利西亚水鸟迁飞的研究具有非常重要的帮助。因此,观鸟者无论看到还是拍到的各类鸟类的足旗、彩环、金属环 (有号码),都请务必仔细观察记录,把信息传送给白清泉: bqqwhite@163.com,袁晓:cmwnryuan@163.com,章克家: wolfteeth@163.com。我们将及时将记录向全国鸟类环志中心汇报,并把反馈信息返回给观测者。(注:请大家不必再向澳洲方面直接提交,以免造成重复统计。)谢谢大家的支持!

REPORT

Shorebirds resightings in mainland China 2006

Introduction

There has been an increasing number of resightings (including leg flags, colour bands, neck bands, wing-marks and metal bands) from mainland China following the rapid development of bird-watching activities there. Included are mainly shorebirds with leg flags. In order to avoid loss of valuable information and to make sure all sightings are reported to the National Bird Banding Center, we have decided to collect the various records of these resightings. It is the first time for such an effort to be made in China, but there has been an enormous response from local birders and bird-watching society, resulting in a steady flow of reports. From the second half of 2006, several people were assigned to collect resighting records from the bird-watching forum on the World Wildlife Fund China webpage; these records are reported to the national bird ringing center once every half year. Here is the summarized report of shorebird resightings in 2006.

Method

A unique leg flag or color band combination is assigned to birds banded in the specific area. Resightings of these combinations give us information about an area of origin in the past of the particular bird sighted (there may be many years in between, and unknown routes flown). For such records we have collected, in many cases through direct contact with the observers, information about date, hour, location, species, leg flags combination and position on leg, age, sex and moult status. Evidence of local movements, such as the Hong Kong leg flag combination (White / Yellow) resighted in Deep Bay, Shenzhen, the Chongming leg flag combination (Black / White) resighted in Shanghai, the Ya Lu Jiang leg flag combination (Green / Orange) resighted in Dan Dong, are not included in this report except for sightings of engraved leg flags.

Results

The records from 2006 comprise of twenty species and 136 records of shorebirds resighted. The birds were banded in 13 different regions, including Australia (4), New Zealand (2), Russia (2), United States (1), mainland China (1), Japan (2) and the Taiwan region (1).

In terms of species, Bar-tailed Godwit (*Limosa lapponica*) (54), Curlew Sandpiper (*Calidris ferruginea*) (16), Great Knot (*Calidris tenuirostris*) (13) and Red Knot (*Calidris canutus*) (12) are the most recorded species, which is equivalent to 39.7 %, 11.8 %, 9.6 % and 8.8 % of the total records. The most reported leg flag or leg flag combination are yellow (Northwest Australia), orange (Victoria, Australia), white (North Island, New Zealand), and black/white combination (Chongming Island, China), with 46, 41, 17 and five records respectively. These added up to 87.5% of the total resighting records. So far, six different banding origins have been recorded for Bar-tailed Godwits, making this species the most diverse in matters of origin.

In terms of banding countries or regions, Australia has the highest number of records, followed by New Zealand and Chongming Island, China. There are 95 records of 14 species from Australia, which is 69.85% of the total records. The sightings of Australian-banded species consisted mainly of Bar-tailed Godwit (34) and Curlew Sandpiper (16). Similarly, the most resighted species from New Zealand is the Bar-tailed Godwit, with 12 records. The leg flag combination for Dongtan, Chongming Island, China was changed

from upper white, lower black to upper black, lower white in April 2006. Four black/white records were reported immediately during the northward migration in 2006 and a total of nine records throughout the year of 2006.

17 sites from Liaoning, Hebei, Tianjin, Shandong, Shanghai, Fujian, Guangdong and other provinces have provided records of resightings. Dandong, Liaoning Province, has the highest number of records (51), and the Bar-tailed Godwit is the most resighted species there (48 records). Tanghai County in Hebei, and Shijing Town Nan' an city in Fujian are two other locations with relative big number of resightings. The former site yielded primarily Red-necked Stint and Curlew Sandpiper, where these species are reported mainly from here. The latter site is the one with the highest number of resighted species: fifteen records of six species, including an observation of the critically endangered Spoonbill Sandpiper (*Calidris pygmeus*), banded in Chukotka, Russia, which needs continuous monitoring in the future. In terms of provinces, Fujian province had the highest number of resighted species, 24 records of 10 species. The species resighted in the highest number of locations was the Red-necked stint (*Calidris pygmeus*); there are records from three provinces, with six sites included. Bar-tailed Godwits came second, recorded from four locations.

Most resightings were made in April and May. Fifty-two records of 10 species were made in May, the list topped by Red Knot (ten records), followed by Red-necked Stint (nine records) and Curlew Sandpiper (nine records). Forty-eight records of nine species were recorded in April, most of them were Bar-tailed Godwits (29 records). From the reverse migration, 12 resightings were made in August, making this the month with the highest number of resightings during southward migration. Nonetheless, the number is significantly lower than numbers from northward migration. Bar-tailed Godwits were recorded in five separate months, making it the species with the largest spread over the seasons. The earliest resighting in spring was an Australian-banded (Victoria, orange leg flag) Far Eastern Curlew (*Numenius madagascariensis*) recorded on 20 March in Dandong.

There are less resightings from southward than from northward migration, regardless of the number of resighted species, resightings, banding sites or resighting sites. 101 records of 15 species were reported from northward migration, while only 35 records of 10 species were reported from southward migration; the resightings obtained during northward migration coming from 10 different banding origins, while only eight origins have given records from southward migration. Fourteen locations have provided records from the northward migration while only eight are involved from the southward migration. The resightings during northward migration are mainly from Victoria, Australia (36), followed by Northwest Australia (30) and North Island, New Zealand (17). During southward migration, the resightings are mainly from Northwest Australia (16), Chongming, China (nine) and Victoria, Australia (five). The most resighted species during northward migration were Bar-tailed Godwit (37), Curlew Sandpiper (16), Great Knot (13) and Red Knot (12), while Bar-tailed Godwit (17) and Dunlin (*Calidris alpina*) (four) were most resighted during southward migration, and no other species offered more than two records. Finally, 41 resightings of Curlew Sandpiper, Great Knot, Red Knot and three other species were made on northward migration, while there are no records from the southward migration.

In addition to the traditional leg flags, there were eight records of engraved leg flags (six from Northwest Australia, two from Chongming) and six records of colour-banded birds from the North Island, New Zealand. These birds could be identified as specific individuals by reading the engraved flags or unique colour band combination. Eleven of them were Bar-tailed Godwits, one was a colour banded Black-winged Stilt (*Himantopus himantopus*) from Taiwan Chiayi. Furthermore, the two records of Marsh Sandpiper (*Tringa stagnatilis*) with yellow leg flag (Northwest Australia) in Shenzhen were the first foreign resightings of Northwest-Australian -banded Marsh Sandpipers.

提交观鸟记录的指引

《中国观鸟年报》是对一年来中国内地观鸟记录的总结,它提供了重要的鸟类分布信息,对观鸟者、鸟类学家、保护区工作人员均有重要的参考价值。因此,年报的出版离不开足够数量和质量的记录。为此,我们十分欢迎国内外的观鸟者、鸟类学家和从事鸟类保护区相关工作的朋友在每年的年底前提交你们当年的鸟类观察记录。

如何提交您的鸟类记录呢? 可以有以下三种方式:

- 1、中国观鸟记录中心: 登陆www.cnbirder.com, 注册为正式用户, 就可以通过在线输入的方式实现记录的 提交和保存:
- 2、电子邮件:将您的记录以Excel、Word、PDF等形式,发送电邮至chinesewildbird@hotmail.com;
- 3、一般邮件:将您的记录通过邮政信件,寄到北京师范大学生命科学学院,张正旺教授收,邮政编码:100875。

最后,十分感谢您对于年报工作的支持。记录被收入年报的提交者,将会在年报中获鸣谢,并会收到我们赠阅的年报,谢谢!

GUIDELINES FOR THE SUBMISSION OF RECORDS

The China Ornithological Society (COS) collects and compiles bird records from China mainland (including Macao SAR). The complied record is published in the annual "China Bird Report".

How to submit your records? You can choose any of the three following ways:

- 1, Online database: visit website www.cnbirder.com, register yourself as a member, and submit your records online to the "Database of China Bird Report" database (detailed instructions given on the website);
- 2, Email: e-mail your records in the format of Excel, Word or PDF etc., to chinesewildbird@hotmail.com;
- 3, Regular mail: mail your paper records to the following address: Prof. Zhang Zhengwang, College of Life Science, Beijing Normal University, Zip code: 100875).

We sincerely thank for your support to the China Bird Report. Contributors whose records are included in the Report will be acknowledged, and they will also receive a complimentary copy for reference.
